Skills

TypeScript, JavaScript, React, Next.js, Node.js, Express, Fastify, Java, Spring Boot, PostgreSQL, AWS, CI/CD, Playwright, Jest, Splunk

Experience

Adobe

San Jose, CA

Software Development Engineer

Apr 2026 – Present

- Primary frontend contributor for a **0-to-1** conversational creation experience **integrating Adobe Express into Acrobat**, enabling users to generate and iteratively edit one-page assets from PDF and Spaces context; built most UI, component/state flows, and client-side integration in **React/TypeScript**.
- **Drove frontend delivery and cross-functional integration** across Express, Acrobat services, Acrobat AI, and multiple frontend teams for a high-visibility feature approaching GA; became a go-to engineer for UI and integration issues and delivered stakeholder demo builds.
- **Implemented and debugged frontend handling for SSE-delivered generation data**, mapping streamed backend events into progressive asset rendering so completed designs appear as they become available instead of waiting for the full batch.
- **Built accessibility and interaction improvements** including keyboard navigation and masonry-grid behavior for generated-asset experiences, improving usability across complex UI states.
- **Onboarded Adobe's internal AI code-review bot** to the team repository and contributed review gating and edge-case rules for agent-generated PRs; received a **July 2026 Bravo Award** recognizing rapid ramp-up, ownership, collaboration, and delivery.

Walmart (Contracted via BeaconFire Solution Inc.)

Sunnyvale, CA

Software Engineer

May 2025 – Jan 2026

- **Architected an internal operations platform** using React 18, Fastify SSR, and a modular sub-app architecture, with SSO, independent code-splitting, and automated rollback/failure-recovery workflows.
- **Led a critical Node.js runtime migration (v12 → v22)** for the Map Generation Service, resolving **~400 commits of upstream divergence** and fixing security vulnerabilities. Completed the sync in a single sprint by manually reconciling 3 years of code drift without regressing existing features.
- **Implemented end-to-end observability** with **Prometheus** and **OpenObserve**, enabling real-time monitoring of map generation latency, failure rates, and rollback events.
- **Optimized the map-generation pipeline** by moving business logic from Spring Boot into Node.js, removing redundant network calls and reducing generation time by 50% (2-4 seconds per store).
- **Established automated release quality gates** with enterprise CI/CD pipelines, semantic versioning, and a custom Playwright validation framework used for production releases.

BeaconFire Solution Inc.

East Windsor, NJ

Full Stack Engineering Consultant

Oct 2024 – May 2025

- **Built a full-stack HR onboarding and management platform** with React, Node.js, Redux Toolkit, JWT authentication, RBAC, and 30+ REST APIs.
- **Implemented scalable document storage** using Amazon S3 and Multer for sensitive employee records within a distributed MongoDB architecture.

Dynasty 11 Studios Inc.

Philadelphia, PA

Software Engineer

Sept 2022 – May 2024

- **Delivered production React and React Native experiences** for HelpDesk and Player 2 products, including dashboards, analytics workflows, and cross-platform application features.
- **Improved Player 2 store load times by 60%** by redesigning React Native data models and refactoring Spring Boot APIs; also implemented RevenueCat-based in-app purchase flows and backend validation.

Education

Drexel University

Bachelor of Science in Computer Science

Philadelphia, PA

2018 – 2023
